

WORLD ORGAN DONORS DAY

Save a LIFE after Life..

SRP Foundation created an awareness session on Organ Donation to mark the “World Organ Donors Day” by WHO. This important topic was explained with suitable examples by the Dean of Karur Medical College Dr. Muthuselvan.

He was supported by his team who created awareness on various types of organs that can be donated and busted some myths surrounding it. Employees came forward and gave their commitment to this truly Nobel cause. One person’s organ can save many lives !Organ donation is a valuable act performed by an individual while either they are alive, or dead, by his successors. The objective of the day is to spread awareness among people and to recognize the selfless efforts made towards mankind and re-establish belief in humanity. The main reason behind such less organ donation is the lack of knowledge among people regarding the process of organ transplant. The common organs that are generally transplanted are the heart, kidneys, liver, or skin. With this I’m happy to inform that my whole family- me, both my parents and father in law donated eyes.

And my husband and mother in law donated whole body to medical college..
